

401 SERIES REGULATORS

The 401 Series regulators are intended for primary pressure control of non-corrosive, high purity, or liquefied gases (up to grade 5.5). These single stage regulators are suitable for applications that can tolerate minor fluctuations in outlet pressure due to diminishing inlet supply or where inlet pressure is constant or under 500 PSIG (34 BAR). Available with a variety of options installed at the factory, CONCOA's 401 Series regulators may be configured as a single station manifold with or without purge, low-pressure alarm, or multiple inlets.

Typical Applications

- High Purity Carrier Gases
- Control of Cryogenic Gases
- Gas and Liquid Chromatography
- Zero, Span, and Calibration Gases
- High Purity Chamber Pressurization
- Liquefied Hydrocarbon Gas Control
- EPA Protocol Standards
